Respected Sir,

SUB: Need of Permission for conducting A one day IETE Seminar on **"FPGA based Accelerators for AI and Machine Learning"**– regarding.

I would like to bring to your kind notice that we have signed MoU with by Mobitech Wireless, Perudurai, so we are going to organize a one day IETE Seminar on **"FPGA-based Accelerators for AI and Machine Learning"** for our Third and Final year students on 21.08.2025 in Auditorium at 10.00 AM by Mobitech Wireless, Perudurai, So I kindly request you to provide permission to conduct the program for our Third and Final year students.

PROGRAM NAME	ACADEMIC YEAR	COMPANY RESOURCE PERSON	SEMINAR DATE	APPROXIMATE NO OF PARTICIPANTS
IETE Seminar on **FPGA based Accelerators for AI and Machine Learning**	2025-2026	Mr.K.Dhevendhiran HR / Team Leader, Mobitech Wireless, Perudurai.	21.08.2025	116

Hence we request you to approve the same.

Thanking You
Yours Truly,

REPORT

The Key future of "FPGA based Accelerators for AI and Machine Learning":

- Reconfigurability – FPGAs can be reprogrammed to support evolving AI and ML algorithms without new hardware.
- Low Latency Processing – Enables real-time inference for applications like autonomous driving and robotics.
- Edge AI Deployment – Supports compact, low-power AI solutions for IoT, smart cameras, and medical devices.
- High Parallelism – FPGA architecture allows simultaneous execution of multiple AI operations.
- AI Model Compression – Future FPGAs will efficiently run quantized, pruned, and sparse AI models to save power and resources.
- Integration with High-Bandwidth Memory (HBM) – Reduces data transfer delays for large-scale deep learning workloads.
- Dynamic Reconfiguration – Ability to switch between different AI tasks in real-time for multi-model environments.
- AI-Driven Design Tools – Use of AI to optimize FPGA programming and resource allocation automatically.
- Cloud and Data Center Applications – FPGA accelerators will power AI workloads in cloud platforms for scalable performance.
- Support for Emerging AI Models – Prepared to handle next-gen neural networks like Transformers and neuromorphic architectures.

"6G-Enabled Internet of Everything (IoE): The Future of Intelligent Connectivity"

Date of Seminar: 23.09.2025

REPORT

The Key future of "6G-Enabled Internet of Everything (IoE)":

- The seminar explored how 6G technology will revolutionize global communication networks beyond 5G.
- It highlighted the concept of the Internet of Everything (IoE), integrating people, data, processes, and things.
- 6G aims to deliver ultra-high speed, low latency, and intelligent connectivity using AI and terahertz communication.
- The convergence of 6G and IoE enables real-time automation, smart decision-making, and human–machine collaboration.
- Applications include smart cities, healthcare, autonomous vehicles, and Industry 5.0.
- Key enabling technologies discussed were edge computing, blockchain, and quantum communication.
- The seminar also addressed challenges like security, energy efficiency, and spectrum management.
- It emphasized the need for global standardization and sustainable network deployment.
- Future trends point toward fully intelligent, interconnected digital-physical ecosystems by 2030.
- 6G-enabled IoE will redefine the future of communication, driving a smarter and more connected world.

Respected Sir,

SUB: Need of Permission for conducting A one day IETE Seminar on **"Mobile Edge Display Support in 5G and Beyond Networks"**– regarding.

I would like to bring to your kind notice that we have signed MoU with by New Technology, Coimbatore, so we are going to organize a one day IETE Seminar on **"Mobile Edge Display Support in 5G and Beyond Networks"** for our Second and Third year students on 13.02.2026 in Smart Class Room at 10.00 AM by New Technology, Coimbatore, So I kindly request you to provide permission to conduct the program for our Second and Third year students.

PROGRAM NAME	ACADEMIC YEAR	COMPANY RESOURCE PERSON	SEMINAR DATE	APPROXIMATE NO OF PARTICIPANTS
IETE Seminar on **Mobile Edge Display Support in 5G and Beyond Networks**	2025-2026	Mr.R.Karthi, Senior Technical Trainer, New Technology, Coimbatore.	13.02.2026	66

Hence we request you to approve the same.

Thanking You
Yours Truly,

REPORT

The Key future of "**Mobile Edge Display Support in 5G and beyond Networks**":

- Mobile Edge Display Support refers to rendering and processing display content (Video, graphics, AR/VR) at the network edge instead of on the device.
- Edge servers are deployed close to 5G base stations, reducing the distance data must travel.
- This significantly reduces end-to-end latency, which is critical for real-time visual applications.
- 5G networks provide the high data rates and low latency required for edge-based display services.
- Network slicing allows dedicated resources for display-intensive applications.
- Display rendering at the edge reduces device processing load and battery consumption.
- Mobile devices can be lighter and less expensive since heavy GPU tasks are offloaded.
- Smart education systems use edge displays for virtual labs and real-time simulations.
- Telemedicine uses edge-rendered visuals for accurate medical imaging and remote diagnostics.
- Autonomous vehicles rely on edge display processing for real-time navigation and alerts.
- Security and privacy of display data remain major technical challenges.
- Beyond 5G (6G) will integrate AI-driven edge rendering and holographic displays.
